Aim: Create a webpage that **retrieves, displays, and updates user data** from a MySQL database. Implement **CRUD operations (Create, Read, Update, Delete)** using PHP & MySQL. Ensure user input is **validated and securely stored** in the database.

Code:

▪ **Db.php:**

```
<?php

$host = '127.0.0.1';
$user = 'root';
$pass = '';
$dbname = 'mdm\_exp6';

$port = 3306;

$conn = new mysqli($host, $user, $pass, $dbname, $port);

if ($conn->connect\_error) {
	die("Connection failed: " . $conn->connect\_error);
}
```

▪ **register.php**

```
<?php
require 'db.php';
$message = '';

if ($\_SERVER\["REQUEST\_METHOD"] == "POST") {
	$username = trim($\_POST\['username']);
	$email = trim($\_POST\['email']);
	$password = $\_POST\['password'];

	if (empty($username) || empty($email) || empty($password)) {
		$message = "All fields are required!";
	} elseif (!filter\_var($email, FILTER\_VALIDATE\_EMAIL)) {
	$message = "Invalid email format!";
	} else {
		$hashed\_password = password\_hash($password, PASSWORD\_DEFAULT);

		$stmt = $conn->prepare("INSERT INTO users (username, email, password)
		VALUES (?, ?, ?)");
		$stmt->bind\_param("sss", $username, $email, $hashed\_password);

		if ($stmt->execute()) {
			$message = "Registration successful! <a href='display.php'>View
			Users</a>";
		} else {
```

```
                $message = "Error: " . $stmt->error;
            }

            $stmt->close();
        }
}
$conn->close();
?>

<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <title>User Registration</title>
    <style>
        body { font-family: Arial, sans-serif; margin: 50px; }
        .container { max-width: 400px; margin: auto; padding: 20px; border: 1px solid #ccc;
border-radius: 5px; }
        input[type="text"], input[type="email"], input[type="password"] { width: 100%;
padding: 10px; margin: 10px 0; box-sizing: border-box; }

    }

    $stmt->close();
}
$conn->close();
?>
```

▪ **search.php**

```
<?php
require 'db.php';

$query = isset($_GET['q']) ? $_GET['q'] : '';

$sql = "SELECT id, username, email, created_at FROM users WHERE username LIKE ? OR
email LIKE ?";
$stmt = $conn->prepare($sql);
```

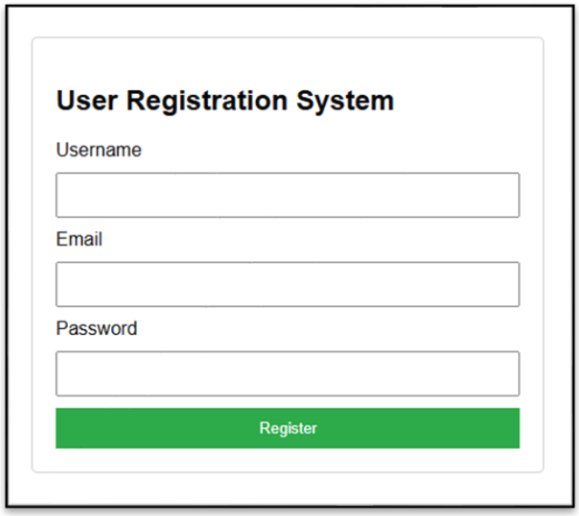
```
$searchTerm = "%" . $query . "%";
$stmt->bind_param("ss", $searchTerm, $searchTerm);
$stmt->execute();
$result = $stmt->get_result();

if ($result->num_rows > 0) {
   while($row = $result->fetch_assoc()) {
      echo "<tr>
            <td>{$row['id']}</td>
            <td>" . htmlspecialchars($row['username']) . "</td>
            <td>" . htmlspecialchars($row['email']) . "</td>
            <td>{$row['created_at']}</td>
            <td>
               <a href='edit.php?id={$row['id']}' class='btn-edit'>Edit</a>
               <a href='delete.php?id={$row['id']}' class='btn-delete' onclick='return
confirm(\"Are you sure?\");'>Delete</a>
            </td>
           </tr>";
   }
} else {
   echo "<tr><td colspan='5'>No matching users found.</td></tr>";
}

$stmt->close();
$conn->close();
?>
```

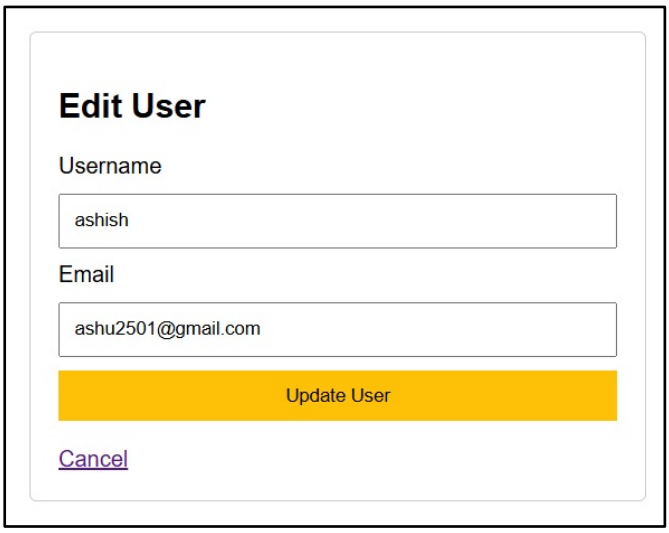
Output:

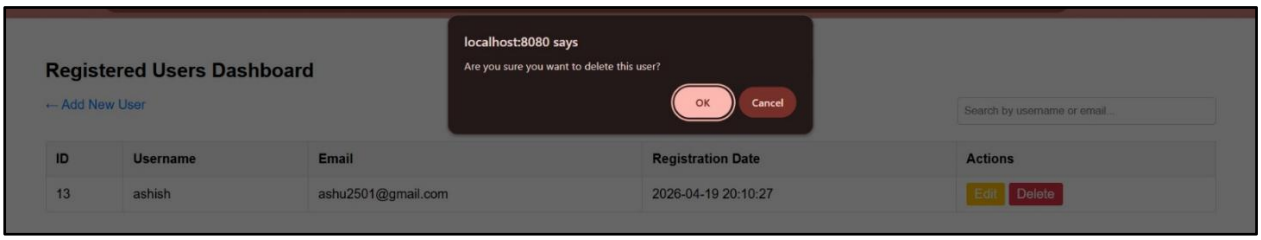
First page: Here the user enters his username, email id and password. After entering the details, the user will get register.

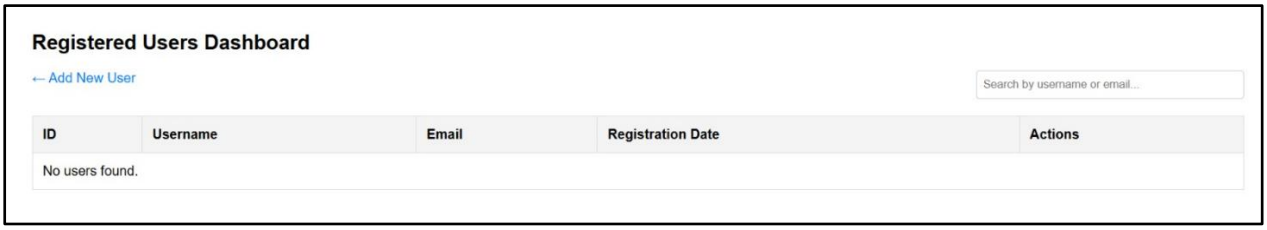


User List page: Here all the users will be listed, with the details that he entered during the registration.

Editing page: Here we will be able to change his username and email.







Delete page: We can delete the user, by clicking the "delete button"
